MINI PROJECT:

Title : **Facial Recognition-Based Attendance Monitoring System.**

Objective : To minimize the time that is consumed when attendance is taken manually.

Description : This project aims to build a system for educational institutions that uses facial recognition technology to automate the attendance-marking process. The system will involve creating a database of facial images for reference. By using a Haar cascade algorithm and EigenFaces recognizer , the stored data is pumped to recognize individuals and mark their attendance. The attendance recording process is faster than the previous system which can go as fast as approximately 3 seconds for each student.
